

TriPoint Diagnostics - Expansion Plan

Servicing and maintenance for Mercedes vans, plus commercial van tuning focused on work-use benefits

This document sets out a practical expansion plan for two new revenue streams under the TriPoint Diagnostics brand: (1) Mercedes van servicing and brake work, and (2) van tuning focused on load-carrying drivability, torque delivery, and route efficiency rather than generic 'more power' marketing. The goal is to add repeatable work, improve customer lifetime value, and create a broader offer stack without diluting the diagnostics-first identity of the business.

1. Executive summary

Expansion	Why it fits	Best use	Priority
Mercedes van servicing and brakes	Creates repeat annual work and easier scheduled jobs for existing van customers	Retention, cross-sell, predictable diary filling	Launch first
Commercial van tuning	Higher-ticket add-on with broad market reach across all makes if marketed around work-use benefits	Upsell, fleet ROI offer, selective paid traffic	Launch second

Recommended rollout order: launch servicing first as the lower-risk repeat-revenue arm, then add tuning as a premium add-on once the pricing, booking workflow, and customer qualification process are in place.

2. Expansion A - Mercedes van servicing and brake work

Proposed focus: scheduled servicing, inspection-led maintenance, and brake work for Mercedes vans only. Target models: Vito W447, Sprinter W906 and W907/W910, and Citan W415/W420.

2.1 Positioning

- Mobile Mercedes van servicing for owner-drivers, sole traders, and small fleets.
- Planned maintenance done at home, yard, or workplace - built around convenience and less downtime.
- A premium independent alternative to dealer servicing for routine maintenance jobs.
- Separate this offer from diagnostics in the menu, but use diagnostics as the trust anchor.

2.2 Best jobs to offer

- Minor (A-style) oil service packages.
- Major (B-style) service packages once the checklist is fully standardised.
- Front brake pads and front pads plus discs packages.
- Rear brake work only with strong quoting rules and condition qualifiers.
- Service plus visual vehicle health check as an upsell.

2.3 Jobs to avoid or tightly control

- Anything needing ramp-level access or extensive underbody stripping.

- Heavily corroded rear brake jobs without a clear contingency surcharge.
- Large repair jobs disguised as 'just a service' without pre-qualification.
- Generic all-makes servicing ads that drag in low-margin price shoppers.

2.4 Recommended retail pricing

Offer	Citan	Vito W447	Sprinter	Notes
Minor service	GBP145-165	GBP175-205	GBP195-235	Entry-point service, easiest to standardise
Major service	GBP245-285	GBP295-345	GBP345-425	Only after process is fully locked down
Front pads only	GBP150-180	GBP160-190	GBP180-220	Keep wear sensor as optional extra
Front pads + discs	GBP280-340	GBP290-360	GBP360-450	High-demand, strong packaged offer
Rear pads only	GBP145-175	GBP150-190	GBP190-240	Use strict condition qualifiers
Rear pads + discs	GBP320-420	GBP320-420	GBP380-500	Only with contingency language

Suggested add-ons: brake wear sensor GBP15-35, seized slider clean-up GBP20-40, severe corrosion extra time GBP30-60, brake fluid service GBP75-110, and fixed zone travel surcharges rather than ad-hoc travel pricing.

2.5 Why it is commercially attractive

- Creates annual and semi-annual repeat work instead of relying only on urgent faults.
- Lower cognitive load than complex diagnostics, so it helps fill planned slots in the diary.
- Strong cross-sell potential from existing Mercedes van diagnostics customers.
- Makes your business more 'sticky' because customers who trust you with servicing are more likely to return for diagnostics and repairs.

2.6 Recommended advertising funnel

- Do not lead with generic 'car servicing' or 'brakes near me' PPC.
- Build model-specific pages first: Mercedes van servicing, Sprinter service, Vito service, Citan service, and matching brake pages.
- Use fixed 'from' pricing and clear inclusions so customers self-qualify before contacting you.
- Primary acquisition channels: Google Business Profile services, existing customer upsell, reminder campaigns, local SEO pages, then tightly-targeted Google Ads.
- Best initial PPC themes: 'Mercedes van service', 'Sprinter service', 'Vito service', 'Sprinter brake pads and discs'.

2.7 Suggested website and offer stack

- Core page: Mercedes Van Servicing.

- Sub-pages: Sprinter Service, Vito Service, Citan Service, Sprinter Brakes, Vito Brakes, Citan Brakes.
- Lead CTA: 'Book Minor Service from GBP199' or 'Get a fixed brake quote'.
- Pre-qualification fields: reg, mileage, front/rear, model, service due, warning lights, any supplied parts.

3. Expansion B - Commercial van tuning

This expansion should be positioned as a work-van optimisation service, not a boy-racer tuning product. The strongest commercial message is improved real-world drivability for loaded vans: stronger mid-range pull, easier overtakes, better hill performance, less frequent downshifts, and smoother daily use.

3.1 Positioning

- Lead with 'load and driveability', not headline bhp claims.
- Talk about usable torque, route performance, and driving feel under payload.
- Use Stage 1 remap as the technical descriptor, not the front-end sales headline.
- Keep this section separate from diagnostics and separate again from any future enthusiast/performance work.

3.2 Product names that fit the brand

- Van Load and Driveability Tune
- Commercial Van Torque Optimisation
- Van Economy and Driveability Calibration
- Fleet Torque and Economy Tune

3.3 Recommended offer stack

Offer	Best customer	Core benefit	Price guide
Load and Driveability Tune	Trades, couriers, loaded work vans	Stronger low/mid-range torque and easier loaded driving	See vehicle size pricing
Economy Tune	High-mileage owner-drivers and route-heavy fleets	Smoother cruising and potential fuel savings if driven the same way	See vehicle size pricing
Fleet Van Calibration	Small fleets and trade accounts	Consistency, better drivability, fleet-day pricing	3+ vehicle discount or site-day rate

3.4 Recommended retail pricing

Vehicle class	Examples	Recommended retail	Notes
Small vans	Citan, Connect, Berlingo, Kangoo	GBP199-249	Good entry point
Medium vans	Vito, Transit Custom, Trafic, Vivaro	GBP249-299	Do not underprice
Large vans	Sprinter, Crafter, Transit, Boxer, Daily	GBP299-399	Premium work-van tuning slot

Fleet suggestion: for 3 or more vans, offer a 10-15% volume saving or a fixed site-day rate instead of ad-hoc one-off pricing.

3.5 Qualification process

- Collect reg, make/model, engine, gearbox, mileage, typical load, route type, and any current faults before quoting.
- Build a mandatory pre-check or diagnostic screen before any tune is sold.
- Do not promise fixed mpg gains; discuss potential economy benefits depending on route, load, and driving style.
- Add a handover note reminding customers to check insurance or fleet policy requirements for modifications.

3.6 Best advertising funnel

- Do not lead with generic 'stage 1 remap' messaging.
- Lead with work-use outcomes: pulls better when loaded, stronger mid-range torque, better hill performance, smoother on route.
- Build dedicated pages: Van Load and Driveability Tune, Van Economy Tune, Fleet Van Tuning.
- Use a quote-first CTA: reg + engine + load/use pattern + postcode.
- Best PPC themes: 'van economy tune', 'van torque tune', 'transit custom economy remap', 'sprinter torque tune', 'fleet van tuning'.
- Keep tuning campaigns separate from diagnostics campaigns to avoid polluting search terms and audience intent.

3.7 Why it is commercially attractive

- Higher ticket than routine servicing.
- Broadens your market beyond Mercedes while still staying van-first.
- Strong upsell from existing van customers who already trust your technical ability.
- Easy to frame around business outcomes rather than vanity performance.

4. Combined rollout strategy

4.1 First 30 days

- Launch Mercedes van servicing as the first expansion.
- Publish a simple fixed-price menu for minor service, major service, and front brake packages.
- Add these offers to the website, GBP services, and WhatsApp quick-reply templates.
- Build a reminder workflow for existing customers: annual service reminders and brake checks.

4.2 Days 31-60

- Track time-on-job, parts margin, and conversion rates on service/brake enquiries.
- Add rear brake jobs only if your quoting process and contingency surcharges are working.
- Start SEO pages for model-specific service and brake offers.

4.3 Days 61-90

- Launch van tuning with a diagnostics/pre-check gate.
- Publish three tuning pages: load and driveability, economy, and fleet tuning.
- Run tuning as a separate ad funnel and separate offer family.

- Cross-sell tuning only to suitable vehicles and established customers first.

4.4 Priority recommendation

If only one expansion is launched immediately, choose servicing first. It offers more predictable scheduling, easier customer education, and better repeat revenue. Tuning should follow once your admin, quoting, and qualification process are mature enough to support it without distracting from diagnostics.

5. Simple profit logic

- Servicing makes sense because it fills quieter planned slots and improves retention.
- Brake work makes sense because packaged front brake jobs are easy to understand and easy to sell.
- Tuning makes sense because it is a higher-ticket add-on with strong business-use messaging when sold correctly.
- Diagnostics should remain the trust anchor and the premium front-end offer.
- The biggest risk is mixing too many audiences in one funnel. Keep diagnostics, servicing, and tuning distinct in your messaging and advertising.

6. Immediate next actions

- Publish pricing pages for Mercedes van servicing and brake packages.
- Create model-specific booking forms with the right pre-qualification fields.
- Add a separate van tuning section with quote-first workflows.
- Build separate Google Ads / landing pages for diagnostics vs servicing vs tuning.
- Use existing customer base first before scaling paid traffic.
